

How do you gain the **PROFESSIONAL EDGE** needed to compete in a big business world – **WHILE REDUCING COSTS?**

Hosted IP PBX is a Business Voice Service that was designed specifically to provide small businesses with all the features relied on in today's business world – except:

- No equipment to buy, install or maintain
- Affordably priced plans
- Features work between all offices and employees, regardless of geographical location
- Free calling between all users on the service
- Available upgrades include electronic faxing and IVR

Features

Extension Dialing and Call Transfer provides reliable PBX quality extension dialing and transfer of calls within your entire organization regardless of physical location.

Voice Messaging not only accepts calls from your callers when you are busy or not available but also allows you to distribute and forward messages within your organization. Messages can be sent to a single person or group distribution lists.

Find Me / Follow Me ensures you never miss an important call by re-routing calls to your office line to up to 6 simultaneous or sequenced numbers that you keep updated from any web browser.

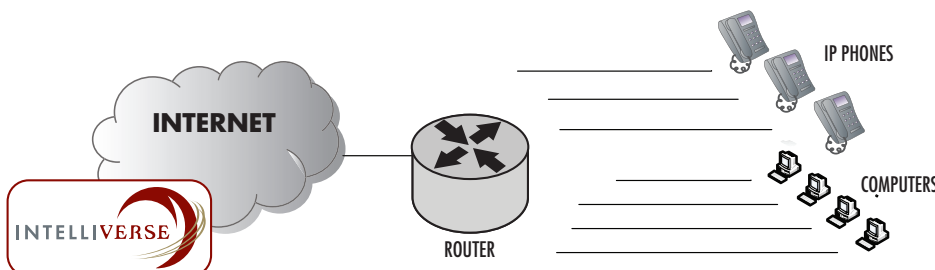

Auto-Attendant allows you to design and implement your own professional call answering service (IVR) to handle incoming calls to your business.

Hunt Groups allow you to create and maintain your own list of phone extensions that efficiently answer incoming calls, by either blast or sequential groups.

Softphone turns any computer into a fully functional telephone. Using a headset or microphone and speaker, you can make and receive phone calls over the Internet right from your computer.

How Does IP PBX Work?

The intelligence and features of an on-premise phone system are provided by centralized servers in Intelliverse's network. Phones and other IP end points in your offices communicate with these servers over the internet. You get the advantages of an expensive phone system without the capital expense or maintenance costs.
