

Want to **REDUCE** your local and long distance costs – while using your **EXISTING** phone system?

With SIP Trunking, you can leverage your investment in a PBX or Key System and use cost efficient IP technology to lower your monthly telco costs. Save as much as 65%!

- Nationwide coverage – one provider across the country
- Free calling between all users on the service
- Available upgrades include electronic faxing and IVR

Features

Local dial tone, E911, directory listing, caller id with name – all easily integrate with your existing phone system.

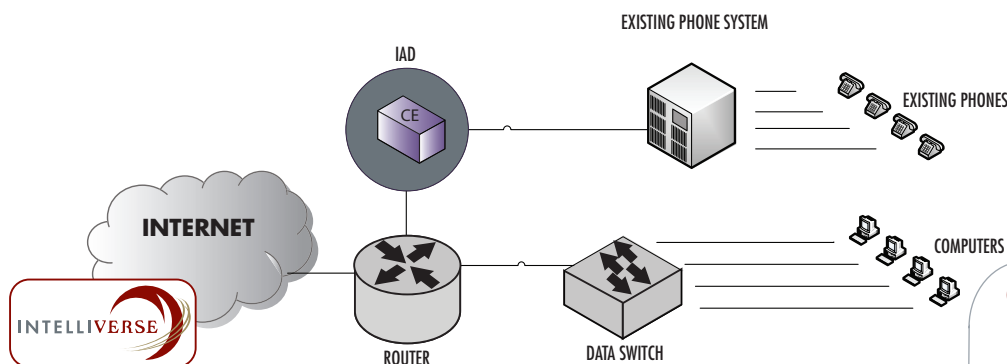

Local and LD Calling: Choose a plan to fit your requirements. Make and receive calls just as you do today.

E911: Emergency calls are immediately sent along with your registered physical address to an Electronically bonded Public Safety Answering Point

Directory Listing: Have your business listed in the local business white pages and retain the option to advertise in the yellow pages

How Does SIP Trunking Work?

An Internet Access Device (IAD) is installed in your office, allowing your existing analog or digital phone system to be connected to the IP based Intelliverse service. There is no need to replace any of your phones or change your phone numbers. Your phones stay connected to your existing phone system, as they are today.
